

# POWERED BY THE 4-STAGE AIR PURIFICATION SYSTEM

1

## PRE FILTER

Traps larger particles such as dust, hair and pollen. This filter is water washable.

2

## CARBON FILTER

Eliminates odours and formaldehyde to clean the air, particularly of unpleasant odours.

3

## PERFECT FILTER

Traps unpleasant odours and has anti-bacterial function which collects bacteria and suppresses reproduction.

4

## HEPA FILTER

Traps 99.9% of microscopic particles (0.3 microns or larger), including tobacco smoke, and common allergens like pollen, mould spores and household dust.

## SUPPORTS ALLERGIES

Air purifiers help support people with asthma or other breathing problems. Using an air purifier with a HEPA (high-efficiency particulate air) filter is designed to catch 99.7% of harmful bacteria.

## NEUTRALISE ODOURS

Air purifiers help neutralise odours. An air purifier can help trap odours before it ends up on your upholstery.

## CLEANER AIR

Air purifiers ensure your customers, staff and colleagues are breathing clean air. Indoor air is two to five times dirtier than outdoor air - sometimes up to 100 times dirtier. A good air purifier keeps you healthy.
